

ArthroSoothe™ Cream

Support for Joint and Muscle Discomfort

MUSCULOSKELETAL

ArthroSoothe™ Cream is a soothing topical cream that utilizes ingredients such as eucalyptus, peppermint, and tea tree oils, along with methylsulfonylmethane (MSM), glucosamine, chondroitin, hyaluronic acid (HA), and a blend of herbal extracts. This product provides a warming effect followed by a surface-cooling effect to help support occasional joint and muscle discomfort.

Joints, cartilage, ligaments, tendons, and the synovial fluid that surrounds and lubricates the joints all undergo a continuous but slow regeneration process as a part of aging. This process can be affected by several factors, including nutritional status, activity level, hormone function, stress, aging, toxic burden, immune and gut health, and certain medications.

Glucosamine and chondroitin are the building blocks of cartilage. MSM is a small compound present in the environment and within the human body and provides most of its benefits by supplying the body with sulfur. Approximately half of the sulfur in the human body resides in muscles, skin, and bones. Sulfur is another building block of collagen, which is the primary constituent of cartilage, skin, and connective tissue. Hyaluronic acid is a natural substance found in the fluids of joints, and it is a key molecule involved in skin moisture. ArthroSoothe™ Cream is ideal for individuals who experience occasional discomfort associated with the continuous use of joints and muscles.

Benefits*

- Supports occasional discomfort in joints and muscles

Directions

Massage into skin as needed. Can be repeated several times a day as desired.

Highlights

- Features a proprietary herbal blend
- Includes the building blocks of cartilage, glucosamine, chondroitin, and MSM
- Menthol and essential oil blend for a gentle warming followed by a cooling effect
- Hyaluronic acid added for skin moisture retention support
- Convenient topical delivery
